

**EXCELLART**

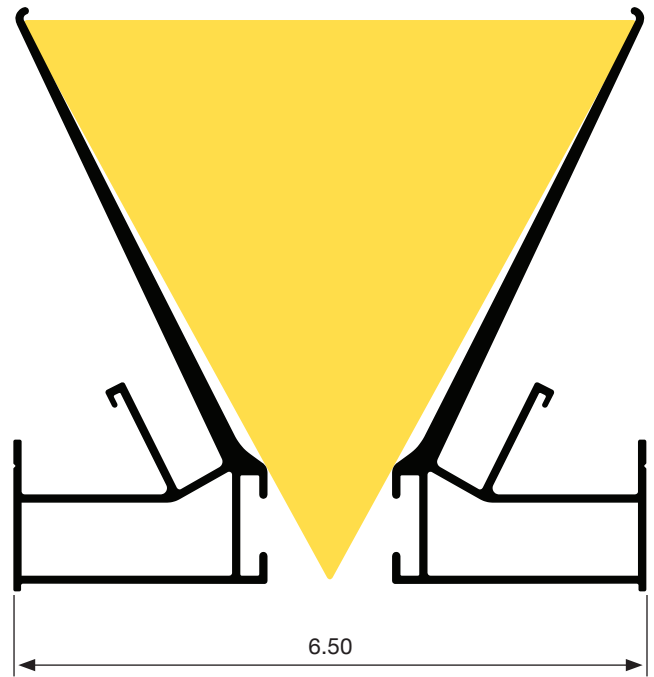

# Light Throw Comparison

Flex Integrated vs. Flex Integrated 2.0

**FLEX INTEGRATED FRAME**

**Flex Integrated** is a great option for variety of signs and fits well in less complex shapes where tightness isn't as much of an issue.

**FLEX INTEGRATED 2.0 FRAME**

**Flex Integrated 2.0** is our premium option and works best when signs are tight or require significant kerf-cutting to achieve the tightest corners.

**Every sign has its unique characteristics and qualities that drive frame choice.** For many, the Flex Integrated is a great choice; however, each sign is unique. It's important to consider the sizing of your cabinet as our minimum recommendations aren't just based on physical sizing, but also light projection. Signs may benefit from: additional/brighter LEDs and/or baffles and risers for LEDs in certain areas. In addition to the methods laid out above, there are many different techniques to optimize light projection but we do the hard work for you with our Flex Integrated 2.0.
